

RAINWATER HARVESTING

Take the opportunity to complete your house with an Oakstown Rainwater Harvesting System

RELIABLE

SUSTAINABLE

DURABLE

NATURE FRIENDLY

WHY USE RAIN WATER?

- ✓ It is environmental friendly-uses water falling naturally on your roof
- ✓ Replaces treated and pumped municipal water supply
- ✓ Soft water- eliminates problems with limescale
- ✓ More suitable for lime-intolerant plants
- ✓ Reduces detergent use when washing clothes

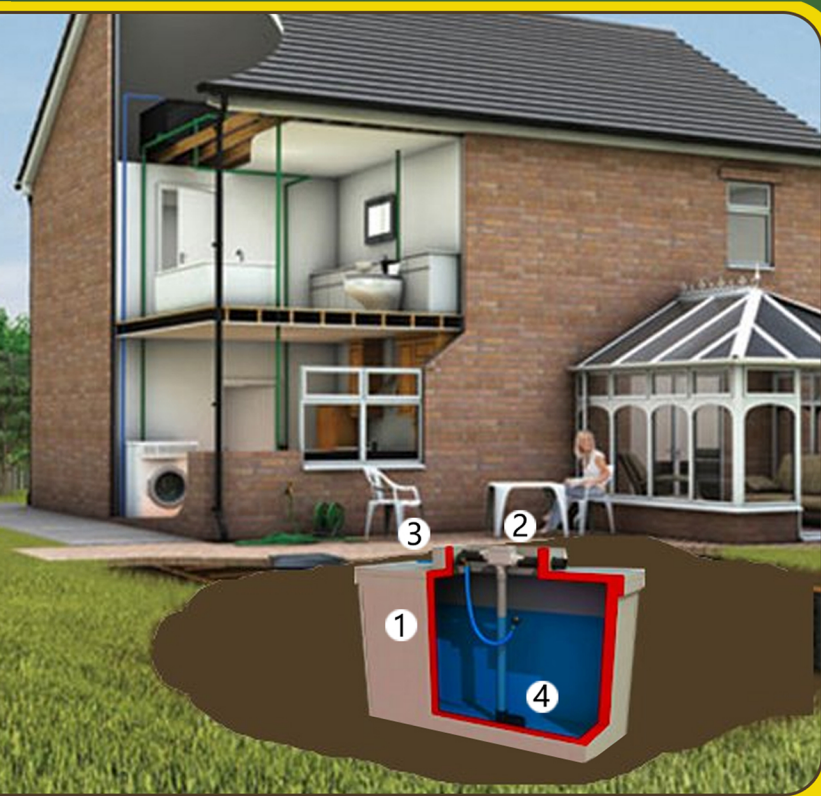

RAIN WATER HARVESTING SYSTEM

OAKSTOWN RAINBANK

We in Ireland are fortunate to get more rain than almost anywhere in Europe. However, much of the rain which falls on our property simply goes to waste while the water we use in our toilets, washing machines and garden is purified at considerable expense.

Up to 50% of our daily water requirements can and should be met from rainwater, thereby saving money and contributing to the protection of a key natural resource.

WHAT CAN I USE THE WATER FOR?

Harvested rainwater is ideal for washing machines, dishwashers, toilets and garden use. We do not recommend it to be used for drinking, cooking, showering or washing without further treatment.

SPECIFICATIONS

- 1 : 4300 litre concrete tank
- 2 : Debris Filter
- 3 : Water Pump & Integrated Pressure Switch
- 4 : Calmed Inlet

WHY USE A RAINBANK SYSTEM?

- ✓ Generous water storage capacity
- ✓ Professionally installed by our truck and technician

HOW DOES IT WORK?

- ✓ Rainwater is channelled from the roof via the downpipes through a filter in a reinforced concrete tank
- ✓ Any leaves or debris are flushed away to the stormwater outlet, allowing clean water to flow through the calmed inlet.
- ✓ This water is then pumped back to the house on demand by a pump fitted with an integrated pressure switch.
- ✓ When water levels run low, the mains water supply automatically kicks in.
